Re: **Second Quarter 2005 Groundwater Monitoring Report**
Dave's 76
1666 Main Street
Fortuna, California
LOP #12708
Project No. NC-20

Dear Mr. Stone,

This report presents the results of the Second Quarter 2005 groundwater monitoring activities at 1666 Main Street, Fortuna, Humboldt County, California (site) (Figure 1), and was prepared for Mr. David Ansley by Blue Rock Environmental, Inc. (Blue Rock).

Background

Site Description

The site is located on Main Street in the City of Fortuna, Humboldt County, California one block north west of the intersection of Main Street and South Fortuna Boulevard (Figure 1). The site is an active service station constructed in 1958 that sells gasoline and diesel fuel. Onsite improvements consist of a single story building, two dispenser islands and three double wall fiberglass wrapped underground storage tanks (UST). The tank complex contains one 6,000-gallon UST storing premium gasoline, one 12,000-gallon UST storing regular gasoline and one 6,000-gallon diesel UST utilizing four fuel dispensers. Water and sewer services at the site are provided by public utilities. The site is paved with asphalt with the exception of the northwest corner in the vicinity of the former waste oil UST.

Site History

In 1995, one waste oil UST was removed by the station owner. Soil and groundwater samples were not collected by the owner. In March 1999, three 6,000-gallon gasoline USTs located in a complex at the eastern end of the property, and one 2,000-gallon diesel UST located approximately 5 feet west of the south fuel dispenser island were removed by Beacom Construction of Fortuna, California. The removed USTs were replaced with the previously mentioned current UST system.

During UST excavation activities of March 1999, visibly contaminated soil was removed through overexcavation of the tank pits which formerly contained the diesel and gasoline USTs. Approximately 450 cubic yards of petroleum contaminated soil were removed from the excavations. The soil was stockpiled on site and covered with plastic sheeting. Analytical results of samples collected from the excavations confirmed the presence of gasoline and diesel range hydrocarbons in the soil and groundwater.

The excavation was deepened below first encountered groundwater. Groundwater was encountered in the excavations at a depth of approximately 5.5 feet below ground surface (bgs). Groundwater was pumped from the excavation into an onsite holding tank. In April 1999, Clearwater Group (Clearwater) installed an aeration system onsite and groundwater in the holding tank was aerated by pumping air into the standing water. This was performed to volatilize some of the existing hydrocarbons prior to offsite disposal. Aerated groundwater was subsequently disposed of offsite by a licensed contractor. As previously mentioned, the new USTs were installed in the existing excavation. The excavation associated with the diesel UST was subsequently backfilled with clean imported gravel.

Site Investigation and Corrective Action History

In September 2000, Clearwater supervised Denbeste Trucking of Windsor, California in the removal of soil generated during the overexcavation activities of March 1999. Approximately 724 tons of petroleum impacted soil was transported to Forward Inc. in Manteca, California. Soil below the former stockpile was sampled per Humboldt County Division of Environmental Health (HCDEH) requirements.

On January 8, 9, and 12, 2001, Clearwater supervised Clearheart Drilling of Santa Rosa, California in the drilling of 11 soil borings. On February 14, 2001, three 2-inch monitoring wells (MW-1 to MW-3) were installed in accordance with Clearwater's *Revised Subsurface Investigation Workplan* dated November 3, 1999. Well construction details are presented in Table 2. Data collected during this phase of investigation confirmed the presence of gasoline, diesel and motor oil range hydrocarbons in soil and groundwater at the subject site. Results of the subsurface investigation are presented in Clearwater's *Subsurface Investigation Report* dated March 22, 2001.

On November 15, 2001, Clearwater supervised Mitchell Drilling Environmental (MDE) of Rancho Cordova, California in the installation of five 2-inch diameter monitoring wells (MW-4, through MW-8) in accordance with Clearwater's *Plume Delineation Workplan / Sensitive Receptor Survey* dated July 19, 2001. Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Fourth Quarter 2001 Quarterly Monitoring Report* dated January 10, 2002.

On June 10, 2002, Clearwater supervised MDE in the installation of four 2-inch diameter monitoring wells (MW-9, through MW-12) in accordance with Clearwater's *Workplan for*

Additional Investigation dated April 8, 2002. Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Second Quarter 2002 Quarterly Monitoring Report* dated July 31, 2002.

On October 11, 2002, Clearwater supervised MDE in the installation of two 2-inch diameter monitoring wells (MW-13 and MW-14) in accordance with Clearwater's *Workplan for Additional Investigation* dated August 30, 2002. Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Fourth Quarter 2002 Quarterly Monitoring Report* dated November 25, 2002.

In accordance with Clearwater's *Workplan for Additional Investigation* dated February 20, 2003, Clearwater supervised MDE in drilling four 8-inch diameter soil borings on June 10, 2003 (MW-15 through MW-18). Results of the subsurface investigation are presented in Clearwater's *Additional Investigation and Third Quarter 2003 Groundwater Monitoring Report* dated August 5, 2003.

On February 11, 2004, Clearwater submitted a *Corrective Action Plan* (CAP) to the HCDEH. In a letter dated February 23, 2004 the HCDEH concurred with the proposed remedial action contained in the CAP. In the letter, the HCDEH recommended abandonment of MW-1, MW-2, and MW-4 prior to implementation of the proposed excavation activities. In May 2004, Blue Rock was retained by Mr. Ansley to continue site work. MW-1, MW-2, and MW-4 were destroyed per HCDEH request in June 2004.

Between the dates of October 19 and October 29, 2004, Blue Rock and Van Meter Construction completed remedial activities associated with the removal and disposal of 790 tons of contaminated soil and approximately 4,000 gallons of groundwater associated with the former UST fuel system at the subject site. Blue also installed one groundwater extraction trench for future connection to a remedial compound.

On October 22, 2004, Blue Rock proposed to relocate the position of proposed extraction trench EX-1. The proposed change was based on subsurface conditions, logistics and cost. The HCDEH concurred with this proposal in a letter dated October 26, 2004. Upon completion of the excavation activities described above Blue Rock prepared and submitted a *Remedial Report of Findings* dated November 12, 2004.

On December 20, 2004 Blue Rock performed a constant discharge aquifer test on EX-1 to determine specifications for the groundwater extraction system proposed in the *CAP* dated February 11, 2004 prepared by Clearwater. Blue Rock subsequently prepared and submitted a *Constant Discharge Aquifer Test and Groundwater Extraction Treatment System Design Report* dated February 3, 2005. The groundwater extraction treatment system design was approved by the HCDEH in a letter dated February 24, 2005.

On March 9 and 10, 2005, Blue Rock supervised Sustainable Technologies of Alameda, California install the approved skid mounted groundwater extraction system. The GWE system

installation was documented with the submittal of Blue Rock's *Groundwater Extraction Treatment System Installation Report* dated March 31, 2005.

Field and Laboratory Activities

Groundwater Monitoring Activities

On April 27, 2005, 15 wells (MW-3 and MW-5 through MW-18) were gauged and sampled. Prior to sampling, an electronic water level indicator was used to gauge depth to water in each well, accurate to within ± 0.01 -foot. All wells were checked for the presence of light non-aqueous phase liquid (LNAPL) petroleum prior to purging. No measurable thicknesses of LNAPL were observed on groundwater in any of the wells.

In preparation for sampling, the wells were purged of groundwater until sampling parameters (temperature, pH, and conductivity) stabilized. Following recovery of water levels to at least 80% of their static levels in the other wells, groundwater samples were collected from the wells using disposable polyethylene bailers and transferred to laboratory supplied containers. Sample containers were labeled, documented on a chain-of-custody form, and placed on ice in a cooler for transport to the project laboratory.

Purging instruments were cleaned between use by an Alconox® wash followed by double rinse in clean tap water to prevent cross-contamination. Purge and rinseate water was stored on-site in labeled 55-gallon drums pending future removal and disposal.

Groundwater monitoring and well purging information is presented on Gauge Data/Purge Calculations and Purge Data sheets (attached).

Groundwater Sample Analyses

Groundwater samples were analyzed by Kiff Analytical (Kiff), a DHS-certified laboratory, located in Davis, California, for the following analytes:

- TPHd by EPA Method 8015M (silica gel cleanup)
- TPHg, BTEX, MTBE, TBA, DIPE, ETBE, TAME by EPA Method 8260B
- TPHmo by EPA Method 8015M (MW-8) (silica gel cleanup)

Groundwater Monitoring Results

Groundwater Flow Direction and Gradient

Static groundwater in the wells was present beneath the site at depths ranging from approximately 1.56 (MW-8) to 8.71 (MW-11) feet bgs. Gauging data, combined with well

elevation data, were used to calculate groundwater elevation, and to generate a groundwater elevation and gradient map. In the immediate vicinity of the site, the groundwater flow direction was calculated to be toward the southeast and south at a gradient of approximately 0.047 ft/ft (Figure 3). To the south of the site, there are localized groundwater flow components to the southeast, southwest and northwest. The groundwater gradients and flow directions are consistent with previous measurements.

Groundwater Contaminant Analytical Results

LNAPL:	None
TPHg concentration:	<50 micrograms per liter ($\mu\text{g/L}$) (MW-3, 6, 8, 9, 10, 11, 12, 13, 14, 16, 17, 18) to 3,800 $\mu\text{g/L}$ (MW-7)
TPHd concentration:	<50 micrograms per liter ($\mu\text{g/L}$) (MW-3, 5, 6, 8, 9, 10, 11, 12, 13, 14, 16, 17, 18) to < 500 $\mu\text{g/L}$ (MW-7)
MTBE concentration:	<0.5 $\mu\text{g/L}$ (MW-8, 9, 17) to 620 $\mu\text{g/L}$ (MW-7)
Benzene concentration:	< 0.5 $\mu\text{g/L}$ (MW-3, 6, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18) to 200 $\mu\text{g/L}$ (MW-7)

Groundwater sample analytical results are shown graphically on Figures 4, 5 and 6. Cumulative groundwater sample analytical results are summarized in Table 1. Copies of the laboratory report and chain-of-custody form are attached.

Remarks

Groundwater sample analytical results fall within historical concentration range for the site. The method reporting limit for TPHd in MW-7 was increased due to interference from gasoline range hydrocarbons.

Project Status and Recommendations

- The site is currently being monitored on a quarterly basis per the HCDEH directives. The next quarterly sampling event is scheduled for July 2005. Groundwater samples will be analyzed for TPHg, TPHd, BTEX and MTBE (all wells) and TPHmo (MW-8 only).
- Currently, the groundwater extraction and treatment system is awaiting startup. Startup will commence upon issuance of the discharge permit from the City of Fortuna and permitting from the North Coast Unified Air Quality Management District. System startup and compliance reporting will be submitted with the next quarterly groundwater monitoring report.

Certification

This report was prepared under the supervision of a California Professional Geologist at Blue Rock. All statements, conclusions, and recommendations are based upon published results from past consultants, field observations by Blue Rock, and analyses performed by a state-certified laboratory as they relate to the time, location, and depth of points sampled by Blue Rock or others. Interpretation of data, including spatial distribution and temporal trends, are based on commonly used geologic and scientific principles. It is possible that interpretations, conclusions, and recommendations presented in this report may change, as additional data become available and/or regulations change.

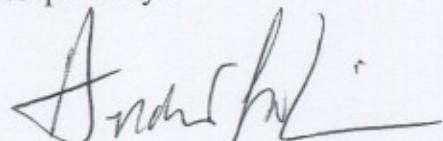

Information and interpretation presented herein are for the sole use of the client and regulating agency. The information and interpretation contained in this document should not be relied upon by a third party.

The service performed by Blue Rock has been conducted in a manner consistent with the level of care and skill ordinarily exercised by members of our profession currently practicing under similar conditions in the area of the site. No other warranty, expressed or implied, is made.

If you have any questions regarding this project, please contact us at (707) 441-1934.

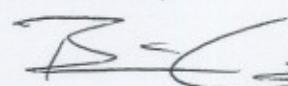

Sincerely,
Blue Rock Environmental, Inc.

Notes:

TOC: Top of well casing referenced to mean sea level (msl).

DTW: Depth to water as referenced to top of casing.

SPH: Separate phase hydrocarbon on top of groundwater.

GWE: Groundwater elevation as referenced to benchmark.

$\mu\text{g/L}$ = parts per billion

MCL: maximum contaminant level, a drinking water standard

TPHg: Total Petroleum Hydrocarbons as Gasoline by EPA Method 5030/8260B

TPHd: Total Petroleum Hydrocarbons as Diesel by EPA Method 3510/8015M

TPHmo: Total Petroleum Hydrocarbons as Motor Oil EPA Method 3510/8015M

--: Not analyzed, available, or applicable

NCRWQCB: North Coast Regional Water Quality Control Board

MW: Monitoring Well

1. Laboratory analysis for diesel and/or motor oil was performed using silica gel cleanup

Benzene by EPA Method 8260B

Toluene by EPA Method 8260B

Ethylbenzene by EPA Method 8260B

Xylenes by EPA Method 8260B

MTBE: Methyl tertiary butyl ether by EPA method 8260B

TBA: Tertiary butyl alcohol by EPA method 8260B

DIPE: Di-isopropyl ether by EPA method 8260B

ETBE: Ethyl tertiary butyl ether by EPA method 8260B

TAME: Tertiary amyl methyl ether by EPA method 8260B

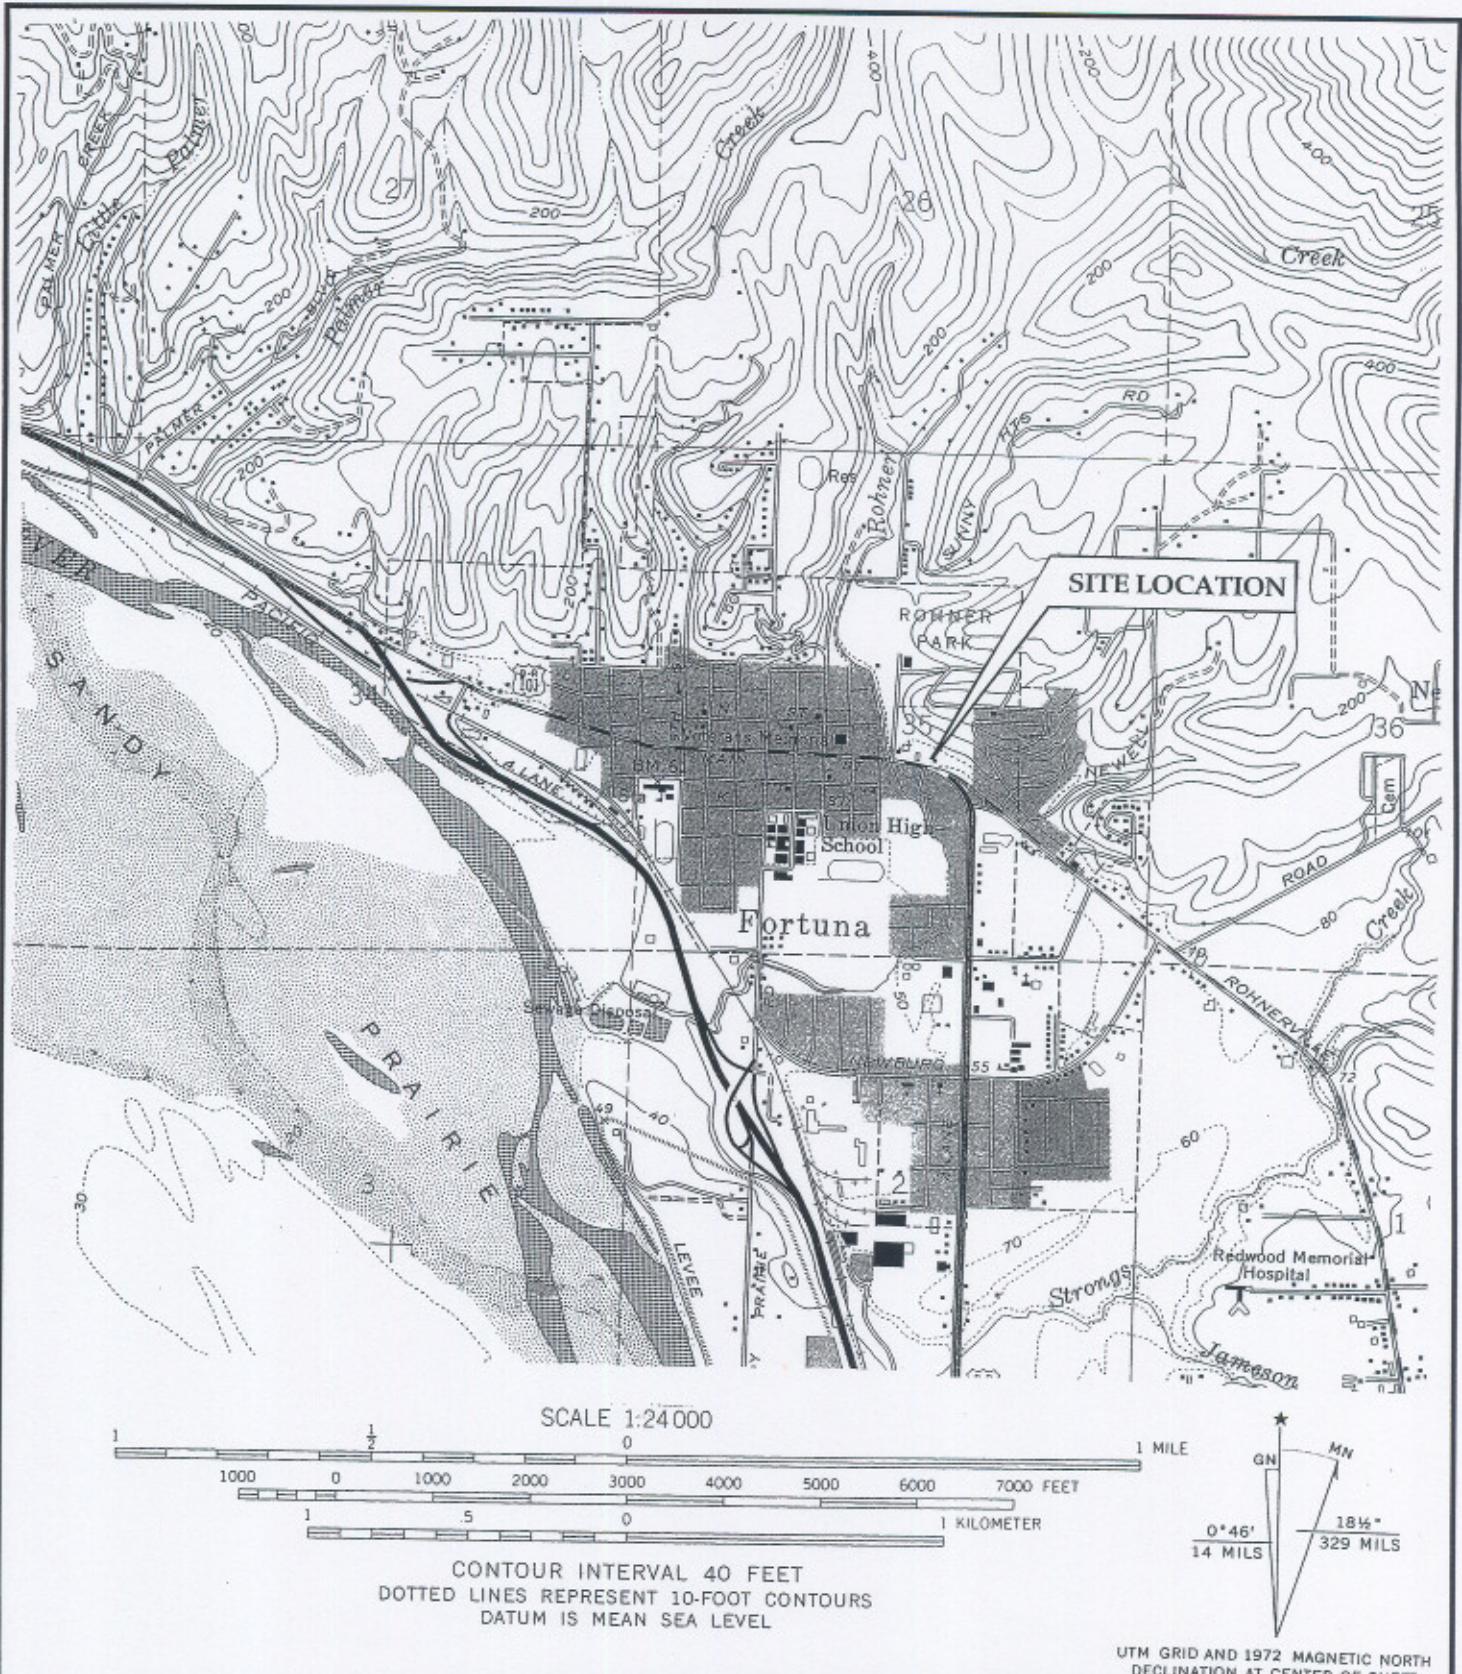

Methanol by Method 8260B

Ethanol by Method 8260B

Sample date in parentheses indicates new well survey per geotracker (NGS(PID#AC9252)"HPGN D CA 01 PB" Singley Rd)

GAGING DATA/PURGE CALCULATIONS

Job No.: NC-20 Location: 1666 Main St. Fortuna Date:

Tech(s): JL, +/-

Explanation:

DIA. = Well Diameter

DTB = Depth to Bottom

DTW = Depth to Water

ST = Saturated Thickness (DTB-DTW)

CV = Casing Volume (ST x cf)

PV = Purge Volume (standard 3 x CV.)

well development 10 x CV)

SPH = Thickness of Separate Phase Hydrocarbons

Conversion Factors (cf):

2 in. dia. well cf = 0.16 gal./ft.

4 in. dia. well cf = 0.65 gal./ft.

6 in. dia. well cf = 1.44 gal./ft.

Eureka, CA 95501

Subject : 15 Water Samples
Project Name : Dave's 76
Project Number : NC-20

Dear Mr. LoCicero,

Chemical analysis of the samples referenced above has been completed. Summaries of the data are contained on the following pages. Sample(s) were received under documented chain-of-custody. US EPA protocols for sample storage and preservation were followed.

Kiff Analytical is certified by the State of California (# 2236). If you have any questions regarding procedures or results, please call me at 530-297-4800.

Sincerely,

A handwritten signature in black ink, appearing to read "Joel Kiff".

Joel Kiff

Subject : 15 Water Samples
Project Name : Dave's 76
Project Number : NC-20

Case Narrative

The Method Reporting Limit for TPH as Diesel is increased due to interference from Gasoline-Range Hydrocarbons for sample MW-7.

Matrix Spike/Matrix Spike Duplicate Results associated with sample MW-7 for the analyte Methyl-t-butyl ether were affected by the analyte concentrations already present in the un-spiked sample.

Approved By:

2795 2nd St, Suite 300 Davis, CA 95616 530-297-4800

A handwritten signature in black ink, appearing to read "Joe Kiff". To the right of the signature, there are two vertical parallel lines.

Relinquished by:

Damez Linderman

Date

4/29/05

Time

Received by:

Fed EX

Remarks: The samples arrived in wet ice via Fed ex @ 1004. The temp. was 4.1°C using IR-1 BAB 842905 1058
